

CR2025 vs. CR2016 Sizes Explained

Description

If your watch has stopped ticking or the battery is running low, it may be time for a battery replacement. Two common battery sizes used in watches are CR2025 and CR2016. In this blog, we will provide you with a comprehensive guide on replacing watch batteries, specifically focusing on the CR2025 and CR2016 sizes. By understanding the process and the differences between these battery types, you can ensure a smooth and successful replacement.

CR2025 Battery: The CR2025 battery is a lithium coin cell battery commonly used in various electronic devices, including watches. To replace a CR2025 battery in your watch, follow these steps:

- a) Gather the necessary tools: You will need a small screwdriver, preferably a jeweler's screwdriver, to open the watch case.
- b) Open the watch case: Carefully remove the back cover of the watch using the screwdriver. Make sure to keep track of any screws or small parts.
- c) Identify the battery: Locate the battery compartment inside the watch. The CR2025 battery should be easily visible.
- d) Remove the old battery: Use a non-metallic tool, such as a plastic tweezer or a toothpick, to gently pry out the old battery from its compartment.
- e) Insert the new battery: Take the new CR2025 battery and place it in the compartment with the positive (+) side facing up. Ensure that the battery is securely seated.
- f) Close the watch case: Carefully align the back cover with the watch case and press it down until it snaps back into place. If there were any screws, reinsert them and tighten them properly.

CR2016 Battery: The CR2016 battery is another commonly used lithium coin cell battery in watches. The process of replacing a CR2016 battery is similar to that of the CR2025. Follow the same steps mentioned above, but ensure that you have the correct battery size for your watch.

Note: It's essential to use the correct battery size specified by the watch manufacturer. Using the wrong battery size can damage the watch or affect its performance.

Conclusion: Replacing watch batteries, such as the CR2025 or CR2016, is a relatively simple process that can be done at home with the right tools and precautions. However, if you are unsure or uncomfortable with the process, it is recommended to seek professional assistance from a watch repair specialist. At We Fix Any Watch, our skilled technicians can help you with watch battery replacements, ensuring proper installation and prolonging the lifespan of your timepiece. Enjoy uninterrupted timekeeping by keeping your watch powered with the right battery size.
