Why is glass replacement important?

Over time, the glass part of the watch may get scratched or cracked due to the several tolls that daily usage causes. This, among other things, not only destroys the appearance of your watch but also affects its functionality. Cracked glass may lead to:

- **Reduce readability:** lines or cracks on the glass can make a time unreadable.
- **Expose the inner mechanism:** A broken glass may let dust, dirt, and moisture into the watch that can further badly damage its inner parts.
- **Affect resale value:** If you're planning to sell or trade your watch in the future, scratched or cracked glass will significantly lower its value.

The replacement of your watch glass ensures it looks great and functions properly, keeping it in pristine condition for years into the future.

Replacement Types of Watch Glasses

We replaced it with the best there is—from mineral to sapphire or even acrylic glass. We have taken care of every kind of watch, be it luxury brands or the everyday devices you carry daily. We do [battery changes](#) and glass changes. Among the watch types that glass replacement usually takes place for are these:

- **Sapphire Crystal:** Made to be scratch-resistant; the more durable version of crystal. Used in most high-end watches, sapphire replacements assure you a perfect look once more from our high-quality sapphire offerings.
- **Mineral Glass:** A more economical option, yet with the equivalent scratch and minor impact resistance. If your watch uses mineral glass, we can replace it with a similar high-performance crystal.
- **Acrylic Glass:** Acrylic glass is mostly used in vintage or budget watches. Acrylic glass scratches more easily but is also easier to polish. We can replace the acrylic glass with a new one that will give you the classic look and feel of your watch.
